

## **ABSTRACT**

A classificatory accounting calculator structure, the calculator consisting of a plurality of classification keys, operation keys, and function keys such that when the operator presses amount number numeric keys, respectively inputting to each classification key,  
5 an internal microprocessor and memory storage enables screen display and verification. When the operation keys are operated, searched operative results can be viewed on a screen or under the coordinated operation of the function keys with the classification keys, originally inputted records can be displayed for update and search usage. As such, the operator utilizes the portable calculator to immediately record amounts spent at the  
10 moment of transaction, thereby effectively achieving classificatory accounting inputted searches.
